

# QuantPayChain API

## Complete Developer Guide

### Getting Started

The QuantPayChain API provides programmatic access to all platform features. This RESTful API supports JSON format and uses standard HTTP methods.

### Authentication

All API requests require authentication using JWT tokens. Obtain your API key from the dashboard and include it in the Authorization header: Authorization: Bearer YOUR\_API\_KEY

### Core Endpoints

Asset Management: - POST /api/assets - Create new asset - GET /api/assets - List all assets - GET /api/assets/{id} - Get asset details  
Token Operations: - POST /api/tokens - Create token - GET /api/tokens/{id} - Get token info  
Transactions: - POST /api/transactions - Execute transaction - GET /api/transactions/{id} - Get transaction status

### Rate Limits

API rate limits are applied per API key: - Standard: 100 requests/minute - Premium: 1000 requests/minute - Enterprise: Custom limits
